

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8b-1 fjs-v1 fd
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-7426

Comment on FR Doc # 2025-02305

Submitter Information

Name: Dirge Truptor

General Comment

Deregulating AI in hopes of gaining some kind of geopolitical advantage is a fool's errand. The slurry of meaning-adjacent noise it generates only produces the illusion of understanding where none exists; to employ it for anything other than entertaining children is to invite disaster. Even this degrades the intelligence of the public - I have personally seen a business advertise itself with a sign depicting a six-fingered woman, and the proprietors seemed to think nothing of it. Datacenters consume immense amounts of energy, release yet more heat into an already warming climate (whether this administration wants to admit it or not), require vast amounts of strategic minerals in the form of hardware that will be quickly outmoded and discarded, all to support an unprofitable, useless gimmick. Whatever apparent utility AI has depends on training data that is untainted by other AI-generated data, and like microplastics in our blood it will eventually become so ubiquitous that the output of these systems degrades even further. Years of claims that a revolution was in progress have produced no killer apps, no improvement in quality of life, no sustainable revenue stream, and no meaningful advantage over conventional technologies. To vitiate American copyright law, already under assault by foreign adversaries, in the service of this mechanical Turk that has deceived the gullible in power would perhaps be the final nail in the coffin of American greatness. This is to say nothing of the inhumanity of replacing living, breathing people with skills honed over lifetimes of experience with automatons that crudely imitate them - but I wonder if that even matters to those making the decision. It's not woke to want humans to shape the world we live in rather than believing whatever the machines tell us. When the NIH has been defunded, AI will not find the cure for Alzheimers. When the desk jockeys have been fired, AI will not be able to figure out how any of these byzantine systems actually worked. When decision makers have to ask ChatGPT what will happen next on the global stage, China and Iran will still have people with human will and wit aiming their missiles. Deregulating AI will not make America great again, it will not promote prosperity for American families, it will not benefit American businesses, it won't own the libs, it will just make the world worsw for no reason. Don't do that.
