As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8b-1 fub-t4o9
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-7431

Comment on FR Doc # 2025-02305

Submitter Information

Name: Michael Balla Jr

[REDACTED]

General Comment

I'm a photographer, long time editor on Wikipedia and write stories in my free time.

Assertions from artificial intelligence operations, such as OpenAI and Google, that they are entitled to use anything they collect, including works protected by US copyright are at odds with long standing United States law surrounding copyright and the rights of individuals making creative works.

They have been open with their intent to undermine the economic opportunities of individuals and groups who make creative works, which completely destroys any argument that their collection and use of copyrighted works is protected under 'fair use', combined with the insistence of having entire works for processing into their black boxes.

As an individual who has provided substantial amounts of work editing Wikipedia under a creative Commons license, I do not believe that the terms of those open licenses are being complied with by these firms, regarding attribution, and I see no indication that it will change going forward.

Allowing them to have unfettered usage of works protected by copyright would in effect make copyright worthless, particularly to individuals and smaller creative firms and result in a catastrophic decline in creative works due to the inability to create and release a work without it being taken and used without consent.
