General Comment

I am a professional writer; at this time, the only tool artists such as myself have to make a living is through the protections of intellectual property law. OpenAI and other large language model businesses have, from their inception, been dependent upon using the UNCOMPENSATED work of visual, audio, and written word artists to create their products. While there is a great deal of utility for AI and machine learning in the sciences--which do not depend on stolen data to train their AI--large language model AI in particular depends upon continued theft of intellectual property from those least able to pay legal fees to defend themselves. If the United States wishes to be a leader in AI, this ongoing theft must be addressed. AI companies must at the least be required to monetarily compensate, at a fair market rate, those whose work they have until now stolen. Additionally, people who do not wish to provide their intellectual property to these companies regardless of compensation must have their property rights respected and protected. Additional examination must be made of intellectual protection and copyright laws as well, to ensure those laws protect human creators rather and exclude the product of machines built upon stolen intellectual property.
