General Comment

I do not believe that AI as it exists currently holds a place in the future of the US. AI as it exists now steals from my friends' livelihoods as American artists and writers, and it profits off of theft. Currently, AI is overhyped and is fleecing the American public.

I believe there is a place for AI, where it can do good. But the current business models do not match that. At best, the current models are no different from crypto scams or NFTs.

AI should be used to enrich everyone, not only a select few. And pushing people out of jobs that depend on these individuals' constant creative input (as AI cannot feed on itself currently) is neither ethical nor intelligent.

Artists and writers are struggling enough. Don't make their lives even worse.
