General Comment

There are insufficient guard rails around what is currently defined as “artificial intelligence” that prompt substantial concerns about giving it personal data without the explicit affirmative consent from individuals. AI has demonstrated issues and known biases and flaws that must be addressed before such steps can be taken, and data protections must be assured prior to any incorporation. People must be allowed control over their individual personal information, including in terms of what the government may use, and must be informed of what is being done with their data and who it is being furnished to. If we do not do that, we are no better than a totalitarian regime.
