General Comment

Open AI and other AI based companies violate copyright laws every day with their scanning of materials available on the internet to build their database. Allowing for profit enterprises to utilize copyrighted material to build their generative AI databases which WILL turn profit at the expense of every resource used to build it. This will destroy over a century of copyright laws that have built the foundation of IP law in the US. It leaves written publications, music creation, and visual artists open to great harm. And the simple fact is that it has not been proven that Gen AI is even necessary. It's largely used to cheat on school work by students, making our next generations dumber than their international counterparts where gen AI is better regulated. It has also proven to be inherently unreliable in the databases inability to parse out what is real, what isn't and what is current knowledge vs what is expired or disproven. Generative AI, at this moment, is theft, waste of natural resources, and only serves to leave the US as a weaker competitor in the global market.
