General Comment

Unregulated AI has already been extremely damaging to copyright protection, jobs, and education. As a teacher, it is hard to overstate the extent to which it has made plagiarism and academic dishonesty both more commonplace and harder to detect. I can see very little upside to allowing overvalued companies suck up vast amounts of capital and energy to steal other people's work in order to pump out disposable slop that has little value beyond making it easier for teenagers to cheat at school. At the very least, AI companies should be strictly prevented from using copyrighted material to train their large language models.
