General Comment

Let me be absolutely &^% clear: AI outputs of word or "visual media" are NOT innovative in the slightest way. They are weak, jumbled regurgitations. They are half baked illegitimate tailored collage copies.

This excerpt, "which hampered the private sector's ability to innovate in AI" is incredibly misleading, ironic, and overstated.

There is nothing innovative or creative about outright theft and reconfigured reproductions.

There is no thought or patience, time or skill required, no understanding of tools or technique necessary, nor depth of comprehension or appreciation for the experience to master.

"AI for art" is for the talentless in want of instant gratification to make a quick dollar.

"AI for art" is the cheapest route corporations and capitalists wish to take, paved by then unemployed and underappreciated artists.

"AI for art" is an overzealous greedy flash pan fad imitation that will run itself ragged to extinction in spite of its fanatic backing because it is just as expendable to its soulless owners as little they value other's beloved artwork; they care about money, not art. They want a result, not a creative process. They want content to sell, not an interest, a hobby, a passion, for the fun and love of art itself.

They want tested, tried and reliable results, nothing fresh, new, provocative or innovative. "AAA Games" and "Hollywood Movies" have shown this time and again, rarely pushing anything forward themselves, taking very little risk, guided by "reliable" algorithms. AI will only make this worse.

AI trained on scraped data (written word as well as images) for Art is repulsive, unethical, and should (rationally) be illegal, and copyright protected.

This all said without going into its tremendous energy consumption.

AI trained on HUMAN CREATIONS WITHOUT CONSENT is disgusting, criminal, and wrong.
