General Comment

AI Technology- and ESPECIALLY Generative AI technology, does not present a tangible benefit to the US, or any nation for that matter. It feeds off of the ingenuity, heart, soul, and intent of creations by human beings for its widespread theft, and is already being used for excessively nefarious purposes. This is to say nothing of the resources wasted on this technology, whether it be energy, materials (precious minerals used for components that allow the processing of generations), and real estate (for server farms). All of these are things that would be better suited to more impactful advancements for our country and humankind. Allowing AI companies to breach the protections offered by copyright will inevitably lead to the stagnation of creativity, harm millions of people across the nation, as well as cause massive losses in revenue for tons of industries that rely on the ingenuity of human beings. Please do not let these companies have their way and send us beyond the point of no return.
