General Comment

As a graphic designer and artist of multiple years, nobody with any kind of conscience can allow AI any sort of copyright protections. Sanctioning generative AI is condoning theft, as it is "trained" via STEALING the work of creatives from all avenues of life to benefit those that are too lazy to learn any sort of craft. Sam Altman, the CEO of OpenAI, recently stated that "it would be impossible to train today's leading AI models without using copyrighted materials," making it clear that this plan would be used to violate copyrights that are essential to protecting actual innovators in fields ranging from mathematics and sciences to engineering to journalism to arts and literature. (<https://committees.parliament.uk/writtenevidence/126981/pdf>). Tools like Generative AI have done IMMENSE damage to multiple industries as it is and put thousands of hard-working Americans out of jobs that they trained for years to obtain. It has done all of this damage and yet, still, it's capabilities are not comparable to a human in any fashion. r example, just two years ago, CNET replaced their financial news desk with "AI," which went on to pen articles with glaring, simple, and crucial errors. (<https://futurism.com/cnet-ai-errors>) There are other issues with the "AI" industry, as well, such as the environmental impact, which, given the administration's lack of concern for global climate change, may not be a major issue in this deliberation. (<https://www.instituteforenergyresearch.org/climate-change/big-corporations-are-abandoning-their-climate-commitments/>)

Generative AI DOES NOT deserve any protections under our legal system, unless our government would also like to start allowing people to steal from grocery stores and sanction online piracy too. I hope that you will strongly consider the moral and environmental concerns that AI brings and do the right thing: not giving it any sort of protection or claim to any copyright system. Thank you.
