General Comment

AI, and technologies purporting to be AI, must be developed carefully and with attention to consequences for any choices made now. Especially important at this stage are ensuring that all creators of existing works are given the chance to opt in or out of having their intellectual property included in training models, considerations about resource use (especially power and water) to support the compute, false narratives and hype regarding the sophistication of particular models, the effects of culling harmful materials on the people doing such work, and consequences of believing technologies can make decisions that require a human mind.
