Roots Automation - Comments to Executive Order 14179

Roots Automation - Comments to Executive Order 14179 - March 2025

*March 15, 2025*

## **RE: Executive Order 14179 – Removing Barriers to American Leadership in Artificial Intelligence**

From: Chaz Perera, Co-Founder & CEO at Roots Automation, and Ratish Dalvi, Head of AI at Roots Automation.

---

As a leading insurance AI innovator, Roots Automation is proud to conduct our business according to the following principles, which we believe are compatible with the U.S. Government's initiatives to strengthen America's position as the global leader in Artificial Intelligence innovation.

We urge this body to consider the following actions and principles for making American AI innovation stronger and more competitive.

### **Comments:**

#### **Keeping Open-Source AI Accessible**

Support open-source AI to accelerate innovation of new products and services from researchers, startups, and developers.

- Avoid banning or overregulating open-source AI, which could inhibit competition and progress.
- Support investment in smaller, smarter open-source models that offer efficient and safe alternatives to large, closed models.

#### **Balancing Innovation and Regulation to Increase Competition in the Closed-Source AI Market**

- Strengthen oversight of closed-source AI to foster competition and innovation.
- Advocate independent testing of high-risk AI models to build trust and confidence in AI by demonstrating that it is being developed and deployed responsibly and ethically.

#### **Prioritizing Safety in the Development of Superintelligent AI**

- Create strict safety guidelines to ensure future superintelligent AI aligns with human values.

- Expand collaboration with other countries to prevent the misuse of superintelligent AI for harmful purposes.

#### **Protecting Copyrighted and Private Data**

- Strengthen laws to prevent AI from using copyrighted materials or personal data without permission.
- Require transparency about the data used when training AI.
- Simplify opt-out processes for individuals and content creators to control how AI systems use their data.

#### **Fostering Competition in AI among Companies of all Sizes**

- Promote decentralized AI systems, such as shared networks and open research collaborations.
- Support policies that allow smaller companies and independent developers to compete in AI without dependency on Big Tech.

#### **Preparing for AI's Impact on America's Labor Force**

- Incentivize investment to create smooth transitions and assistance to workers displaced from traditional roles by AI automation.
- Support safety nets to help those affected by AI-driven automation.

#### **Additional Background on Roots Automation**

Roots Automation is a leading provider of AI-powered solutions for the insurance industry. The company's Agentic AI platform enables insurers to transform their operations with unmatched accuracy and speed. Roots Automation's pre-trained, insurance-specific AI, [InsurGPT™](#), delivers rapid time-to-value, measured in weeks, not months. Used by three of the top five P&C carriers and three of the top ten brokers, Roots Automation enables brands to liberate their teams from complex workflows, allowing them to focus on what truly matters – delighting customers with superior service and care.
