General Comment

I'm cautious and affronted that in order for AI to operate as it does now, it requires broad and undefined permission to use images and media that its creators *do not own.* Like, what, there isn't even a plan to negotiate for artists and photographers and writers to choose to willingly submit their work with compensation,? We just let AI rampantly take and process anything for usage, even copyrighted works or personal creations?

And then there's the concern of AI deepfake videos spreading misinformation of things that never happened, or god, people getting fake nudes made of them like what happened with Taylor Swift. It's a disgusting misuse of technology that puts people at risk of being deceived or hurt.

And every time these issues come up, there's never a clear answer from the AI-approved side on how AI's power will be limited to prevent abuse. As things are right now I don't see a future for AI in federal use unless it comes with strict limits.
