General Comment

This is unneeded in American business commerce and should not be allowed to operate in exception to copyright law. This endangers the sanctity of Intellectual Properties and proprietary solutions that foster healthy competition in the capitalist market. AI, like many failed tech trends such as NFTs, is a short sighted fad that will only hurt society, economics, and the environment- it should be more regulated, not less. It possess safety, security, and privacy concerns that left unchecked will only bring more disfunction that will take more money, resources, and energy to undo in the future. AI will only serve to take away jobs from the American people and is an inefficient, resource excessive solution to other possible economic solutions. Foundational rework and innovation should be the focus and be led by human initiatives. AI is not only theft of knowledge but is a money sink and waste of potential where resources can be allocated into other more stable and widely accepted endeavors that will better bolster American society.
