## General Comment

Generative AI provides no use whatsoever to the future of the US. It is an overhyped technology that is promoted to solve problems that are more efficiently solved by other means. In most use cases, it fails to do the things that it claims to be capable of, wasting the time and money of every person who has to deal with it. The use of copyrighted material to train AI is theft of intellectual property and steals the financial incentive for creating new writing and art. The insertion of generative AI into products makes them useless and annoying.

There is no value in encouraging the development of AI. Do not reduce the fee regulations that exist.
