General Comment

Generative AI has no place in government functioning, nor anywhere else except a curiosity. Generative AI does not "think," it is essentially a slightly more sophisticated form of predictive text in your phone keyboard, and should not be trusted to provide anything more complex than a joke. All current gen AI was built by stealing content from people who did NOT agree to have their work utilized for other people to make money from in boom-bust vulture capitalism markets. Gen AI steals the livelihoods of US citizens in nearly every creative field and in numerous other fields as well. It is simply a flash-in-the-pan tech-bro obsession of the day that will collapse just as quickly as its predecessors like NFTs did before it, and circumventing our current laws to make exceptions for it would be an insane and ill-advised course of action that would be looked on historically as a joke.
