General Comment

AI is the latest grift in a long line of grifts from people who care more about monetizing tech than actually improving the world with it. For years big proponents of LLM generative AI models have waxed poetic about what great good it could do for the world and not a single bit of has solidified in the slightest. Neural Networks are interesting tech and can in the right fields be used for great benefit (like when a cheese detecting algorithm turned out to be good at identifying cancer cells), but that's not what companies like OpenAI care about or are even offering. They aim to sift through the grand wealth of human ideas and creative works and sell it back to you like a culturally defunct hotdog. All around us in the world are signs that the snake oil generative AI companies are peddling are making things worse. People ditch windows 11 for windows 10 to get away from it, Google provides dangerous lies in place of real information, eBook stores are increasingly getting clogged by 0-effort AI generated nonsense. For the companies creating this to have the gal to beg the public to let them claim stake to everyone's words, thoughts and creations, is insulting. I, and many like me, insist that these plagiarism peddlers be cut off at the source. They have already violated copyright law and public trust as it is, for these grifty tech startups have one goal: to become so entrenched in the world they can't be removed before their illegal actions catch up to them. Don't enable the grift, don't enable the theft, don't allow unproven tech companies that are only held up by hype gained from outright lies to game the economy with nothing worthwhile to offer in return.
