General Comment

Generative AI is theft. There's no 'maybe', it exists only to take output from actual people and repackage it with no compensation. It has no place in America's future.

The output, even in an imaginary hypothetical situation where it could be ethically sourced, is substandard to that of actual humans, often inaccurate, requires absurd amount of power which puts further strain on our already fragile environment, and pushes real people out of positions that a fancy algorithm can almost do somewhat competently.

There is no future in generative AI. Do not encourage it. Do not use it. Protect original material from theft.
