## General Comment

As a private citizen I am deeply concerned by the entire rationale of this executive order calling for revoking President Biden's Executive Order 14110 imposing what this notice calls "imposing burdensome government requirements" on AI development.

Rather than imposing burdensome regulations, the prior Administration's sole focus was on protecting the intellectual property of American writers, artists, and other creators, to ensure that the fruits of their intellectual labor are not devoured by artificial intelligence to be spat out in the form of regurgitated large language models and predictive text. American intellectual and artistic contributions have brought the world untold economic and cultural benefits for centuries, through a model that protects intellectual property for the creators and their heirs for a lifetime before entering the public domain.

President Trump's Executive Order 14179 will whittle away at those intellectual property protections and the economic base that sustains writers, editors, artists, and other creative industries -- the very industries that have strengthened American cultural leadership globally for decades and created immense cultural and economic wealth for our nation. Strong IP protections are a foundation of our legal system; in China and Africa and the former Soviet bloc, creators could not benefit from their efforts because their work would be immediately stolen, adapted, interpolated into other media, and printed or reproduced without their consent, approval, or revenue sharing. The United States would quickly move in that direction if AI can immediately absorb, interpolate, remix, and reproduce content directly driven by the original creators' efforts, without appropriate consent and recompense.
