General Comment

Artificial intelligence corporations and development teams should not be given free access to all information. Copyright information should only be usable by these groups with the explicit permission of the copyright owner. Shielding these companies from any penalties for violating copyright or any other privacy regulation will only harm in the long run, as no small creators or businesses will be able to keep their information safe from Intellectual Property theft. This would also be a violation of personal privacy for anyone that does not expressly consent to have their information used by an artificial intelligence training algorithm. People's privacy and livelihood should be a higher priority than any company striving to further a tool that is already used inappropriately by large corporations.

Technology like AI should be created with the utmost care and safety. Not by reckless business people who only seek to make money, regardless of the safety of others. Loosening the already nearly nonexistent regulations on artificial intelligence development would only further steal from those who actually deserve the credit for their work.
