General Comment

As an American worker in creative industries, AI profits off theft of my work and those of workers like me. It devalues the efforts of hard-working Americans in favor of poor-quality output that, while flashy and impressive at a glance, is ultimately insufficient as a replacement. As impoverishing as this "good-enough" miasma is in creative works, I believe it is far more impoverishing culturally for America to strive for a world where artists and authors are driven out of existence.

It is absurd and abominable that generative applications like these are allowed to freely strip-mine the unique and hard-wrought creative efforts of Americans without payment or credit. This is far from "unnecessarily burdensome", it is the bare minimum.

Furthermore, I do not believe that "private sector AI innovation" is worthy of such special attention. Over the past several years, I have seen such generative AI tools apply increasingly negative effects over time. My research efforts have been stymied by blocks of nonsensical texts, incorrect summaries, references to nonexistent works, and images that do not accurately depict the subjects they purport to -- all enabled by these generative tools. I have seen incredible tools like the Internet become appreciably less useful over the past few years. The massive funneling of funds into these products and companies strikes me as wasteful and short-sighted. I do not believe such generative AI holds a place in the future of the US.
