General Comment

Greetings,

I am an illustrator by trade. Removing copyright restrictions in order to steal my work and train "machine learning" models directly impacts my livelihood negatively. Generative machine learning tools flood markets with low-quality products. They waste precious energy, water, computational power, money, and time, in an age where all of those things are becoming more scarce, all while providing no actual benefit to humanity as a whole.

Even if actual artificial sentience would be a benefit to humanity, it is not achievable through machine learning technology. Here is an interesting, well-researched article for further reading:

Do not allow tech industry charlatans to trick you into allowing them to steal and profit personally off of the entirety of our collective culture.
