General Comment

As a computer science professional and person who is integrating LLM technology into software, it is imperative that we limit the data being used to train and develop AI technology. The privacy of individual Americans and the copyrights of corporations hold more value, and must be prioritized above, the training of AI models. The technology is a flexible productivity tool but is not an all-encompassing boon to human development. In addition private sector companies, especially those that are publicly traded, are too beholden to irrational market swings to be trusted with unrestricted personal data access. Regulations around AI development should be increased, not decreased, and honest appraisals of the companies involved should be performed.
