General Comment

This proposal is farcical at best. The notion that Google, OpenAI, and other such entities should be allowed to help themselves to everyone else's intellectual property and copyrighted material without compensation is playing with the aspects of Communism everyone agrees are terrible, it would essentially bring the most frustrating aspects of China into the US.

There is no universe where OpenAI comes anywhere close to being a matter of "national security." This is not the space race, it's not a nuclear power, there is nothing lost or gained in that regard by another module being able to write a sentence slightly cleaner.

In our current time, these programs are primarily used in extraordinarily bad faith by people stealing artwork and literature for monetary gain, it is used by students to attempt to cheat their way through school (to disastrous effect so far), and it is used by fraudsters who use it to try and generate frivolous illegal lawsuits.

If Google wants to improve their systems, they need to commit to doing it through their own work and deals, not by disregarding copyright laws and stealing the work of others. These laws were put in place for a reason, and they need to be upheld. AI's guardrails not only need to remain in place, they need to be strengthened to protect the future of our country's legal system, the education system, and our creative wings.

I implore anyone who reads this, strike this proposal down for the sake of the USA's future.
