General Comment

With Due Respect,

The race for AI dominance is an important one for our mutual security as a Nation and for our moral security as a Society. What we train AI on will not only dictate the responses we can expect from it but also the usefulness we ourselves will see in ourselves.

For the purposes of AI National Defense we should take great effort in creating an AI that is able to protect us from external AI threats while simultaneously avoiding unnecessary loss to human (citizen) freedom. AI activity for National Defense should, within reason, be transparent to its citizens, if AIs are used to monitor individuals there must be warrants for such application, and if AIs are instructed to avoid monitoring specific individuals that should be public information as well.

As for private use, great care must be taken to ensure that human copywritten work is protected from freeloading appropriation for the use of AI training. Personally I welcome individuals selling their work for the purpose of training or educating AI but the wholesale action to coopt countless copywritten works can not be allowed. It would be a shame if, for example the Trump family, received no recompense when their books are used to train for-profit AI models. If people become afraid their work will be stolen they will cease creative output and we as a Nation will stagnate instead of moving swiftly forward. Just as importantly, there are many already making a profit writing and selling books on Amazon using AI, and then AI being trained on these books create a cycle of self-reinforcing sterile vapid content that will ultimately drive people away from AI as a product; people will always reject sameness. We must protect Human innovation at a basic level, otherwise what are we? For what purpose is money if nothing is worth buying. For what purpose is a Leader/President when there are no goals for our Nation to attain and an AI is just as good (or better) at achieving a status quo.

Innovation is the Heart of Humanity, Tech companies need to embrace innovation instead of crying about difficult restrictions, it is in fact under the greatest restrictions that the most bold innovations are made.
