General Comment

As the author of half a dozen novels and a technology journalist and commentator of almost two decades, I have grave concerns about allowing AI unfettered and unchallenged access to copyrighted materials. This would remove a fundamental protection of creative professionals in the US, and opens the door to hurt American workers in these fields. If the answer is that it is what China does, is that really the example we want to emulate? It's a short-sighted decision that undermines what is really valuable: human created works of art. Ultimately it only benefits those who sit at the top of these companies by removing restrictions that are in place for well-founded reasons. American ingenuity should be able to develop these technologies without sacrificing the very thing they are supposedly in service to, the citizens of this country.
