

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8b-1ppn-dbtY
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-7673

Comment on FR Doc # 2025-02305

Submitter Information

Name: Micah Schuett

Email: [REDACTED]

General Comment

I am here to comment because I refuse to let anything else continue to head backwards towards progression. Humans are marvels and our augmentation of creating AI is an achievement, however we need to regulate our use of it due to its hand in not proper handle of source material.

I particularly am an animator, but also work as a public servant due to the current lack of jobs my latter career path has right now. And that is due to the involvement of AI taking the helm of many industries and producers rather than having careful eye in the process, and it will only continue to get worse unless some regulation is taken on it. Because while I am still in a fortunate position to have a job that allows me to do my animation on the side still, there are hundreds of thousands of people who do have this as their career and need regulation of how AI uses their work.

Let it be known if not already the biggest controversy of AI is where it uses its source material. The fiasco with Google's initial "Gemini" implemented in the search results was not only a hilariously baffling downfall, but could pose risks to peoples wellbeing as well. After all, one of its suggestions was to put glue on pizza for cheese to stick better to it.

In addition to physical harm, legal harm is another issue with AI as many people use their work that is shared in clouds and drives as Non Disclosure Agreements; a binding contract that involves work that cannot be discussed or shared until authorized by the publisher or producer. AI utilizing this can involve many lawsuits that I know many would not like to take part on in either side, which is why there needs to be a strong arm issuing where the line can be drawn on its use.

All in all, I would like to imagine a future where AI could be used as a tool that benefits in many ways in our ever-so changing technological world. But for now, we need to maintain it so we can have that potential.

Thank you for allowing me to comment.
