General Comment

As a capitalist nation, the United States is no stranger to private individuals manifesting inventions, ideas or creations and distributing said inventions, ideas, and creations to the free market under the fair exchange of currency. Copyright is there to protect the individual idea from unjust perversion and encourage its evolution through the inspiration by the free market without thoroughly erasing the existence original invention, idea, or creation. By allowing the abolition of copyright for the unscrupulous intentions of OpenAI and other like entities, not only do we abolish the essence of the free market, it eviscerates the very foundation of capitalism; that any private individual can controls the means and distribution of their own production and should not have the means of their production egregious stolen and abused by predatory profit-hungry entities without compensation, as determined by the infringed private entity.

Say no to allowing OpenAI and similar businesses from training their datasets on copyrighted material.
