General Comment

Generative AI has proven itself time and time again as a technology that is fundamentally unprofitable, and every promise that bigger LLM data sets will lead to better models has yet to live up to expectation. Meanwhile, the proliferation of Generative AI has stolen from the livelihoods of countless Americans, particularly in creative industries, often with the explicit intent of undermining their roles in the economy. America is a titan of culture creation, and the capital which that influence creates is a cornerstone to both our economy and our society. To allow Generative AI this level of access to copyrighted material is to subvert and diminish entire industries with no consideration for the economic or cultural fallout of such an action. Allowing this access will steal jobs, unravel crucial industries, and wreck the American economy for the sake of a technology that has yet to prove itself as useful or revolutionary as it claims to be. To allow this kind of access betrays Americans, which means it is wholly anti-American, and therefore has no place in the future of America.
