General Comment

I'm concerned about the blind acceptance of the idea that AI offers any benefit to society. Its use is costly and consumes vast sums of energy and has yet to yield measurable gain, value, or insight. The so-called AI race is smoke and mirrors, and the hype bubble surrounding it, similar to crypto and NFTs, will pop before producing any meaningful economic or practical benefit to society, aside for a few scattered capitalists.

The barrier between public and private sector must be upheld and firmly entrenched in the AI space. The risk to copyright and intellectual property is dangerously high and ensuring the integrity of these core American values must be prioritized above all other factors. To acquiesce to this tide of foolhardy enthusiasm will unravel the broad foundation of the US economy and lead to economic ruin for the technical and creative sectors of the national research enterprise.
