General Comment

(Shad Brooks) Please think about the implications of allowing AI to dominate our working population. The following are items to consider, in no particular order.

1. Art - AI is built off of LLMs that use art uploaded through social media platforms. There needs to be consideration on copyright infringement with using artist's hard work. Some of these pieces of art take days of work to perfect, and allowing a LLM free access to these works can end up in what would equal to theft.
2. Music - similar to art, LLMs can be built upon copyrighted music. Please take this into consideration and the implementation of any AI rules or regulations. Any audio from musicians should not be used without the explicit consent of the musicians.
3. Writing - while I have personally used AI in proofreading emails, especially for clarity, I do feel like LLMs use writing without the explicit consent of the writers. And any writing that's used without the explicit consent of the writers should not be used in LLMs.
4. Code - I have personally used LLMs/AI to help me with editing code used for python scripts. However, we need some way to allow software developers to mark their scripts to disallow LLM / AI to scrape this data. Please take this into consideration when developing any rules or regulations in the context of this public comment.
