General Comment

The only AI Action Plan that should be developed is one which addresses the rights of original content creators and trademark holders as well as the risk and impact to American jobs and employment.

It has been proven the current "AI" is little more than an advance LLM. "AI" in its current form cannot create anything new from scratch - it can only manipulate existing knowledge-much of which has been scrapped from the web and used in unlawfully in the development of a for-profit product. Over-reliance on AI will lead to a weaker America - we are already losing the technology race with China, and American education is pathetic compared to other 1st world nations.

Increasing use and govt support of AI will lead to increased reliance, ultimately leading to an economically weaker America incapable of generating new innovations, products, or technologies.
