General Comment

Please block this, we absolutely need meaningful regulations and limits in particular on what AI is allowed to do and access.

The ecological impact of training AI as it currently stands consumes ridiculous amounts of energy and, in many cases, precious freshwater resources to cool these training centers. Many argue that the grid "can't support an all-electric lifestyle", and yet are blind to the fact that this includes AI. AI already has stolen from the livelihood of many American citizens, and without regulations like copyright protection for citizens will continue to and leave its victims with no recourse.

Currently, sustaining AI puts incredible strain on resources that would be better allocated elsewhere. In a country where many citizens cannot count on having clean fresh water, training centers for AI are treated as a higher priority, using that water for cooling instead. In addition, AI centers use a massive amount of electricity, putting unnecessary strain on the grids.

Taking regulations off of AI and allowing it to steal any and all data its users please will only harm American people. Corporations have a vested interest in having full access to citizens data - profit. Ultimately they don't want to use these things to improve the quality of life for American people, only to further line their own pockets and are using "national security" as a scare tactic to get what they want.
