General Comment

Allowing AI to be trained on copyrighted material is a gross overstep of copyright law that will do immense, irreparable harm to individuals in creative fields everywhere. As an artist, I don't want my work to be used in AI training. It's my hours and hours of hard work and dedication. I am granted ownership and proprietorship and the ability to choose what is and is not acceptable to use for my artwork under copyright law. AI companies should not be above the law. If they want to use copyrighted works, they should be held to the same standards and processes that ANY commercialized sector is held to: they need express permission from the creator and potentially licensing. Allowing companies to ignore these long-standing, standard systems to protect copyrighted work is unfair to the creatives, as they are not being compensated for their work; meanwhile, it is being used for the profit of others.
