General Comment

In its current state, A.I. is nothing more than a trendy piece of theft software and dead-end investment, providing absolutely no merit or benefit to the present or future of America. It actively threatens my colleagues in creative fields, and it won't be long before it's fleecing Americans in every industry and in their private lives. We need a serious reevaluation and stricter set of regulations before moving forward with this technology, as it currently only serves to take advantage of those who don't understand it in a very brief period.
