General Comment

As an artist running a small business, I'm extremely concerned about the protections that copyright law provides to creative endeavors and intellectual property. "Artificial intelligence" applications that "create" generative work are currently trained on tons of scraped data from millions of writers, artists, photographers, musicians, and more. This has been illegal since day one and should have never happened. Copyright law has always required explicit permission from the IP holder in all uses of that content, and these protections encourage REAL human creativity. Generative AI has stolen huge amounts of data and directly undermines the irreplaceable importance of human creativity and innovation by attempting to supplant the people who created the works that trained it in the first place.

I urge all involved to require measures in this AI action plan that uphold current copyright law and protect artists and other creatives. Technological advancement should not and cannot be built through the exploitation of creative IP.
