General Comment

I do not believe AI holds a place in the future of the US. The technology is too unreliable at this time to be used at scale in any capacity, least of all in large-scale practice, which is where many companies are looking to employ it. On an individual scale, GenAI steals from my livelihood as an American and creative, and profits off of that theft without compensation or otherwise due recourse — this is plagiarism and renders the entire concept of ownership moot. For a country that believes and relies heavily on the capitalist value of ownership, it makes zero sense to allow AI to be left to its own devices unfettered and without robust and detailed regulations and protections. AI is not ready, and humans are not yet evolved enough to use it responsibly. AI is not welcome here.
