General Comment

I am writing to express my enormous concern about the future of artistic expression in this country. If any AI company is given free reign to use anyone's creation and content to "train" AI without permission or compensation, the protections of copyright, trademark, and simple ownership will vanish. AI does not have any "right" to people's creations, as it is not in any way a person or even a corporation. It is, at best, a tool. If that tool needs to be fed people's creations to become useful, let those people decide, and compensate them. If someone doesn't want their content used, they have the right to refuse. That's basic capitalism, and basic humanity. Would anyone suggest a company who creates a better mousetrap is required to freely share that technology? Of course not. They have the right to profit from their labor. In time, others might divine how they created it, and will produce copycat technology, but we do not allow it simply to be stolen with the blessings of the law. AI can be a useful tool, but it is not a necessity requiring the smashing of basic American values.
