Re: National Science Foundation's Request for Information on the Development of an Artificial Intelligence (AI) Action Plan

I am an American citizen who grew up surrounded by artists who helped shape and guide my life in the best ways possible. Art touches everyone's lives in one way or another – be it through entertainment, architecture, even necessities like the clothes we wear.

Copyright laws are in place to protect these people who contribute massively to society, and they will be the first ones hurt if companies like OpenAI get "special allowance" to steal their work.

We need to protect constitutional rights now more than ever, like the rights to our property, which includes intellectual property.

Special exemptions for tech corporations is simply allowing them to steal and exploit the hardworking citizens of this country. It has also been proven that generative AI can be extremely dangerous without appropriate oversight, ex. AI written books published with incorrect, dangerous health advice.

The Action Plan moving forward needs solid regulations placed on AI to reaffirm trust and safety, such as requiring consent from creators for materials to be trained on, transparency from these companies on what source material is being used and for what purposes, and legal safeguards for any creative who does not want their property placed in an AI dataset.

AI has tremendous potential to be a very useful tool moving forward, but only if it is handled mindfully and responsibly. Thank you for the opportunity to comment.
