## General Comment

The removal of guardrails for generative AI will devastate many industries and in the long term limit human art and culture. It will do the exact opposite of promote human flourishing and will incentivize huge companies to lay off workers in favor of AI models. Although these models may be able to output serviceable work at a low price, they ultimately cannot innovate beyond what they are fed on and can never achieve the full potential that human skill can. Overreliance on AI will not only hurt industries in the long run but also result in a culture of mediocrity where the cheapest option is chosen every single time.
