General Comment

I am an American who, although currently does not have a career in the fields of art and video game development, has dreams of entering one of those fields someday, once I feel that I am financially secure enough to do so.

AI systems that demand special exemption from copyright laws to generate such things explicitly threaten my and others ability to accomplish those dreams, as well as the livelihoods of Americans who already have the skills necessary to work in creative fields, by the admission of the corporations sell such programs. This is the result of these AI systems taking the works of such Americans without their consent or giving compensation, and then selling those works to the very clients of these hard working Americans, cutting American creatives and businesses out of an industry that they have spent their lives building their skills in.

To create such loopholes that Big Tech companies ask for would go against the purpose of fair use laws as a means protecting innovation and creativity in hard working Americans, and accomplish nothing other than reducing the amount of jobs available to the American people, especially to those who are not fit for serving in the military. It would also prevent young Americans who have yet to even have the chance to pursue those fields but are too old to gain skills in other fields from finding work, dooming them to a life of debt and poverty.

On top of these negative effects on the livelihoods of numerous Americans, it would also have devastating effects on the environment and on society, such as the massive energy and water requirements to keep the devices that these AI systems require to operate, or the ability to create and spread false information, which is especially dangerous in the world of politics.

Also, I do not give anyone permission to feed my comment into an AI database or program. I just want to make art.
