Re: National Science Foundation's Request for Information on the Development of an Artificial Intelligence (AI) Action Plan

I'm an American who works as an artist. I create comics and artbooks, and I sell them myself to customers. I have worked and developed these skills for years. This work makes up a vital part of my income that I need to survive and support myself.

The AI models made by OpenAI and Google are a threat to my livelihood by trying to erode copyright law. AI models must use training data that comes from real humans. My own work and the work of hundreds of other creators have been taken and used in these systems without our knowledge, consent, or any form of compensation. Not only that, but our art is then used against us as AI image generators are in direct competition with our line of work. How is this okay? Using our art without consent is a violation of copyright, so AI companies are trying to say that if someone uses a machine to manipulate the copyrighted work, it is somehow "fair use."

They present AI systems as being "innovative" but in truth it will stifle American innovation and creativity. It is simply a means of funneling money away from artists and towards the AI owners, and it will stagnate creativity and American soft power in the process.

If artists cannot own their creations, and everything we put online will be stolen by tech companies, what will the incentive be to create? If ordinary Americans create a new innovative piece of computer code, a new visual design, or a new piece of music only to have it immediately stolen by Google and Microsoft, why bother creating it in the first place? How will we possibly make a living doing these things?

There is a place for AI in society, but it should not rely on stolen data. There must be a system that allows creators to continue to create their work and make a living. Without us, AI would not even exist in the first place.

Thank you.
