General Comment

While I agree that AI could have incredible use in many applications, to allow AI to steal data and material, the proper word for “training” AI on material of which the creators do not consent, is nothing short of a violation against human rights to intellectual property and an affront to civilized and decent ownership handlings. Not only will the vast majority of this only create a sea of digital garbage that will impact our real-world climate, it will threaten the careers and financial lives of so many people in creative fields. All this, and for what will ultimately become an uninspired novelty, dampening human output and lessening the arts, which nations used to pride themselves on, to slop.
