General Comment

I do not believe AI belongs in the future of the United States. AI profits off of theft and steals from my livelihood and the livelihood of my fellow citizens. additionally AI swallows resources at an alarming rate for middling benefits. We can not ignore the environmental costs in carbon, training a new AI alone puts immense amounts of carbon into the atmosphere and the energy and water demands that draw essential resources away from people that need them. The reality is that AI promises a lot, it is a powerful technology, but it is not essential, therefore it is essential we do not invest in AI to the detriment of the people it is supposed to benefit. We should not allow tech companies to steal copyrighted material with impunity, We should not allow tech companies to funnel public resources towards their AI projects. At every step we should be concerned with the safe and ethical implementations and developments to AI technology especially with regards to data security, data privacy. AI technology is damaging to the environment. AI is built on theft. AI is not reliable. AI is too costly.
