Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-7814

Comment on FR Doc # 2025-02305

Submitter Information

Name: Taylor Rummes

General Comment

To Whom it May Concern...

It is the belief of this writer that Generative AI (Artificial Intelligence) is one of the greatest threats facing American production and industry at this present time. Generative AI's sampling process implements the unregulated plagiarism of content created by American Workers and the removal of human consideration from the productive process.

This will certainly lead to the disincentivization of all forms of creative work on not just artistic fronts, but in industrial and corporate environments as well. If American Creators cannot reliably make a living without risking their work being copies and reused/resold without their consent, overall production will experience a sharp decline. The continued employment of Generative AI from this point will result in homogenization of American Production, ultimately rendering the United States unable to produce competitive, quality products - an eventuality with drastic economic consequences.

The rights of American Creative Workers must be protected, and these workers must be trusted to continue delivering well-crafted products worthy of investment. Generative AI is a short-term savings scheme with devastating long-term effects, and must not be allowed to continue sourcing itself off of the works of non-consenting American workers or be used as a low-cost alternative to quality work. It is the duty of this administration to guard the rights of the American people and ensure America's ability to continue competing at the highest level in the production of creative work.

To be clear: This administration is expected to stand against the rise of Generative AI and its application in American production.

Thank you,

Taylor D. Rummes, US Citizen
