General Comment

I have very real concerns about the use of copyrighted material for training AI models, and I believe the possible change in rules to allow this training on copyrighted work to be inherently dangerous and morally wrong.

What is the incentive for human artists, writers, filmmakers, and musicians to create new works if they are going to be ingested by AI without permission? How are they supposed to live and thrive if their works are used this way?

There is already a backlash growing against generative AI use, because people want to know that the art they are enjoying is the work of another human, and not soulless AI slop.

Protect the creators of artistic works, and do not allow corporations to use their works without permission.
