General Comment

I am an artist and game developer who has worked on multiple high profile entertainment franchises.

"AI" technologies like ChatGPT, Dall-E, and others are based on the nonconsensual theft of the work of millions of creators across dozens of industries and disciplines. In addition to the legal ramifications of such actions, these AI technologies have repeatedly proven to be dangerous, unreliable, and prone to spreading false information. If being immoral and illegal were not enough, these technologies are not even profitable.

In conclusion, these technologies should not be encouraged, used, or subsidized by the government in any way.

I suggest these "AI" companies be held responsible for obtaining the permission of every single creator for every single work they want to incorporate into their databases. These companies should be required to immediately remove all work for which they do not have such permission from their databases.
