General Comment

I teach university students and write peer-reviewed scientific papers. Both of these fields have suffered immeasurable harm, degradation, and pollution from generative AI.

I have had to adapt my assignments to work around the pervasive “cheating machine” created by widely available AI text generation, and I see younger students struggling to write and feeling pressure to let AI do the thinking for them.

As an academic, I see the manuscript submission and peer-review process harmed by meaningless, worthless, but plausible-sounding slop churned out by AI. This wastes the time of reviewers and editors, and is already sneaking into some journals at an alarming rate.

Add in the fact that most of the content used to train genAI is stolen/copied without permission, and it becomes clear that there is no good justification for allowing these companies to continue their project of theft in order to sell valueless, thoughtless slop to consumers who can't be bothered to think for themselves.
