General Comment

Generative AI is Silicon Valley's false prophet, a griff that can only exist at the expense of hard-working Americans and their art. Allowing OpenAI and other genAI companies, services and models to freely steal from creators will only rob the United States of its exemplary position in the global art and media landscape.

It will send our cultural exports into a downward spiral of mediocrity, with the works of brilliant patriots drowned out by bland ripoffs. Household names like Disney and Warner Bros. will only see short-term profits from unfettered use of the tech; before long they'll be scrambling to cannibalize each others' properties and churn out products of rapidly-degrading quality in order to stay competitive.

When it comes to cultural relevance, we exist in a dog-eat-dog world. By allowing AI to trample all over our nation's copyright law, you're feeding our dogs chocolate: a tasty treat, but a deadly poison.

Do the right thing. Don't let the world overtake us.
