General Comment

I am a citizen and artist from Michigan. "Private sector AI innovation" doesn't concern me in the slightest, but the livelihood of human creators does. GenAI, LLMs, and AI graphics are stealing business from American creators and killing jobs. This isn't like industrialization where more efficient methods mattered and improved quality of life. It is actually a net negative to our way of life because it introduces falsehoods ("hallucinations") that must be manually corrected or, often, are taken as real regardless of the potential hazards of believing something that cannot actually think. If private sector AI is given free rein to take in copyrighted material, expect human creators to stop sharing their works. This is exactly what copyright exists to protect against.
